LEAN CANVAS | TOMATO FARM DECISION SUPPORT

Working proposal • Pilot geography and partner to be selected with local agricultural advisors

PROBLEM

• Disease symptoms are noticed late or confused with nutrient stress.

• Weather and irrigation decisions are hard to combine.

Existing alternatives: informal advice, fixed schedules, generic apps.

SOLUTION

• Enter crop stage, symptoms and basic field conditions.

• ML estimates disease risk; weather and soil inputs inform irrigation prompts.

• A guided agent explains, checks, and schedules follow-up.

UNIQUE VALUE PROPOSITION

A practical, local-language field assistant that turns crop observations and weather into explainable next steps, with a human check for high-impact actions.

UNFAIR ADVANTAGE

To be earned: locally reviewed guidance, consent-based pilot observations, trusted extension partnerships, and transparent evaluation. No proprietary data advantage is assumed at launch.

CUSTOMER SEGMENTS

Primary: smallholder tomato growers in a partner-selected pilot area.

Users/partners: extension workers, farmer groups, agronomists.

Early adopters: growers already using smartphones or assisted digital services.

KEY METRICS

Disease-risk alert precision/recall on an advisor-labelled holdout set.

Irrigation prompt acceptance and reported water-use proxy.

Follow-up completion, comprehension, escalation rate.

CHANNELS

Farmer groups and extension partners.

Assisted onboarding and field demonstrations.

Mobile-first web/app; offline-friendly entry where feasible.

COST STRUCTURE

Data collection and agronomist review.

Model/API hosting, development and maintenance.

Localization, field support, privacy and evaluation.

REVENUE / SUSTAINABILITY

Pilot: grant, university, NGO or public-program support.

Later options: partner contract or affordable group subscription.

Pricing and payer fit require field validation.

SDG alignment: 2.4 resilient, sustainable agriculture • 6.4 water-use efficiency • 13.1 climate resilience. Proposed contribution; impact must be measured.
